Análisis:

La recuperación de un backup completo aumentaba segundos cada 700 registros más.

La recuperación de un backup incremental aumentaba un minuto cada 700 registros más.

Conclusión:

Luego de obtener los resultados de la realización de backup incrementales y backups completos con distintas cantidades de información ingresadas en la base de datos se llega a la conclusión que para este caso en particular la mejor opción es la realización de backups completos dado a que la recuperación de datos es mucho mas rápida que la recuperación de datos con backups incrementales.
